Unique Steam Rail Car for Your On30 Railroad

Ixion Model Railways of the United Kingdom produces this interesting steam railroad car for On30 model railroads. Based on an Australian prototype that used a tiny steam engine for its front truck, the car works today on a tourist line and is known as the Coffee Pot.

The model's smooth running engine swivels like a regular bogie (truck) so that the car can round 18" radius curves. Use it like it is, or buy the optional #85024 cab kit (see below) to turn it into a custom-made contraption for your model railroad.

#85023 On30 Coffee Pot No. 2 . . . \$299.95

This is a special order item.* Please contact Micro-Mark Customer Service at 1-888-263-7076 to place your order (outside the US, call 908-464-6764).

"Americanize" Your Coffee Pot with our Wood Cab and Pilot Conversion Kit

Easy-to-assemble laser-cut wood kit replaces the cab on the #85023 Coffee Pot. Includes two wooden pilots (cowcatchers) and two side doors for the coach, plus instructions.

#85024 Cab Kit for Coffee Pot . . . \$34.95

Be creative! Here's how Tom Piccirillo MMR used the Wood Cab and Pilot Kit to convert his Coffee Pot to make it suitable for his East Coast quarry line.

Tom added air tanks, whistle, bell, headlight, grab irons, rear doorway jams, roof vents, couplers, figures, rubber diaphragms, paint, lettering and weathering to make an outstanding model.
